Full-stack engineer with hands-on experience building and debugging production software systems across backend services, APIs, and data pipelines. Strong foundation in Python, TypeScript, SQL, and Linux, with agile/CI-CD experience and a track record of delivering reliable software in team-based, regulated environments.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, SQL, HTML, CSS

Frontend: React, Next.js, Tailwind, Supabase Auth, Client/Server Components

Backend: Node.js, Supabase (Postgres), REST APIs, Django, SQL

AI & Data: Vectorize, LangChain, RAG, GPT-4 Vision, GPT-5, Multi-Agent Systems

Tools: Git, Linux, Firecrawl MCP, Docker, VS Code

Concepts: Full-Stack Development, Data Structures and Algorithms, REST API Design, Asynchronous Processing, Data Modeling, Observability, Testing, Agile, Scrum, Unit Testing

PROJECTS

FF15 (Next.js, TypeScript, Supabase, OpenAI API, GPT-4 Vision)

[Live Site](#) | [GitHub](#)

Multi-agent AI health platform where users photograph meals for automatic nutrition tracking, generate recipes from pantry inventory, and receive personalized fitness coaching from 9 specialized AI subagents.

- ❖ Designed and shipped a production software platform end-to-end, owning the full stack from UI components through backend services and data pipelines, with a focus on reliability, observability, and maintainable interfaces.
- ❖ Built reusable UI components and data-fetching patterns that abstracted backend complexity, ensuring predictable, maintainable interfaces with auditable outputs.
- ❖ Identified and resolved a critical performance bottleneck by profiling execution paths and rearchitecting sequential workflows into parallel execution, reducing response times from minutes to seconds.

DegenGPT (Next.js, TypeScript, GPT-5, Vectorize, Firecrawl MCP)

[Live Site](#) | [GitHub](#)

Multi-agent AI platform for sports betting analysis with RAG-powered knowledge retrieval and real-time web scraping capabilities.

- ❖ Designed and implemented real-time data ingestion and processing pipelines, improving system responsiveness and reliability under time-sensitive operational conditions.
- ❖ Built modular service abstractions across frontend and backend, enabling rapid feature iteration while maintaining system stability and reducing regression risk.
- ❖ Shipped streaming interfaces with real-time execution tracing and observability, improving task completion rates through direct user feedback and iteration.

TheGrind (Next.js, TypeScript, Supabase, Claude API, Chrome Extension)

[Live Site](#) | [GitHub](#)

Gamified job search tracker that reframes applications as an RPG campaign, with a Kanban board, XP/leveling system, and a Chrome extension for one-click job capture from any job board.

- ❖ Designed and built a full-stack job tracking platform end-to-end, including Supabase auth, a drag-and-drop Kanban board with multi-select, and an XP/leveling system driving user engagement.
- ❖ Built a Chrome MV3 browser extension with an independent auth session and layered DOM extraction, enabling one-click job capture directly from LinkedIn, Greenhouse, Lever, and other job boards.
- ❖ Integrated the Claude API to generate context-aware status reactions and recaps, and implemented LaunchDarkly feature flagging to gate a server-side recruiter demo mode with a zero-redeploy kill switch.

EXPERIENCE

Agent Engineering Bootcamp — Agent Lab / Maven

Sep 2025 – Oct 2025

- ❖ Completed an intensive engineering program covering system design, software architecture, testing methodologies, and iterative development practices in a team-based environment.
- ❖ Delivered a full-stack web application using Next.js, TypeScript, and Supabase, implementing frontend interfaces, backend services, database integrations, and scalable agent orchestration with function-calling workflows.

Engineer Intern — Wistron Neweb Corporation

Aug 2022 – Dec 2022

- ❖ Delivered an internal documentation platform featuring user authentication and structured data storage, collaborating with engineering and operations teams to support stakeholder requirements.
- ❖ Diagnosed and resolved issues across operating system, database, and application layers, applying structured troubleshooting techniques to maintain system reliability.
- ❖ Collaborated with cross-functional teams to gather requirements, improve internal tool stability, and support operational workflows.

EDUCATION

San Jose State University — B.S. Management Information Systems

Aug 2019 – May 2024

GPA: 3.6/4.0 | Relevant Coursework: Data Structures & Algorithms, Database Management, Data Analytics
